Answers to Questions

CHART 1

- What are at least 2 pre-attentive strategies used in this chart.
I made the bars big and the title big so eyes would jump to those two places.
- What do you like or not like about it?

I actually don't like the lines that are added, I think it would have been better to show the lines in another way, maybe little checkpoints of where each point is. I found the lines distracting and didn't like how they cut across everything.

CHART 2

- Why did you choose the one you did.
Since this chart was supposed to be a comparison chart of Michigan and other BIG10 schools, I felt it was better if I compared Michigan to the other schools per year and not Michigan to itself which would look more like a progress chart or something of that nature.
 - Try looking at the chart as a horizontal bar instead of a column/vertical bar. (You can use the icon in your ribbon to easily make this switch). Which do you prefer and why?
I prefer the vertical bar because it is what I am used to seeing, I see them much more often so they just look "correct" to me.
-
